Result of examination:

The unknown voices on specimens Q1 and Q2, and the known voice sample on specimen K1 were subjected to spectrographic (voiceprint) comparison, which revealed numerous aural and spectral similarities normally associated with the same speaker.

Voice identification by the spectrographic method is not considered a positive means of speaker identification and the results of such examinations are furnished for investigative guidance only.

Three direct copies each were prepared of specimen K1 and the designated portions of specimens Q1 through Q3, onto separate magnetic tape cassettes.

b6
b7C

Specimens Q1, Q2, Q3 and K1, and the direct copies were personally delivered to Engineering Technician [redacted] on July 19, 1986. The transcriptions will be retained.
